

## What is Web Designing Course?

Web design is the skill of creating presentations of content that is delivered to an end-user through the World Wide Web. Website is not just creating layout and adding content, images. **Website Design** involves client requirement analysis, usability, concept creation, layout designing, and conversation of Photoshop design to html/css, functionality implementation and browser testing. While creating websites the primary focus will be on client requirements and targeted users of the *website*.
